

## **My Life Journey**

**Hey, I'm Bharat.**

**If you want to know my story, I think I should start from the very beginning—not from my career, not from my college, and not even from my school. My story actually starts in a small town in Uttarakhand called Ranikhet.**

### **Where My Story Begins — Ranikhet**

**I was born in Ranikhet, Uttarakhand, in a government hospital. My mother had a cesarean delivery. Obviously, I don't remember those days myself because I was too young, but these are the stories I've heard from my family.**

**After I was born, I was taken to my village, where my Naamkaran Sanskar, or naming ceremony, took place. I spent quite a lot of time at my maternal family's home before eventually returning to the village.**

**When I was around two years old, my life changed a little. My family moved to Almora city because my father, Anand Mohan Joshi, was working there as a power engineer at BSNL.**

**And honestly, when I think about my childhood, I think of Almora.**

**That's where I grew up.**

**That's where many of my earliest memories were created.**

**I studied at Saraswati Shishu Mandir, where I went through LKG, UKG, and Classes 1 to 3.**

**I also had an early childhood friend named Naina. Her father owned the house where we lived, and Naina and her family treated me very well. I also have a younger sister, Pratibha, and my mother's name is Manju Joshi.**

**I obviously don't remember every detail from those first few years, but these little pieces are where my story begins.**

---

### **School, Science and Being the "Bright Student"**

**As I grew older, I continued my schooling, and I was generally considered a bright student.**

**I usually ranked first or second in my class.**

**In Class 5, I even became the president of my school.**

**I was particularly interested in science. I wasn't someone who was satisfied with simply reading something in a textbook. I wanted to know how things actually worked.**

**One of the biggest experiences from this period was participating in a national-level science quiz.**

**Our team won first place at the block level, then first place at the district level, and then first place at the state level.**

**Finally, we reached the national level.**

**And there, we secured third place.**

**That experience taught me a lot. Looking back, though, I don't think this particular period had as much influence on the person I eventually became as some of the later stages of my life.**

**But it was definitely one of the first signs that I enjoyed learning, competing, and exploring things beyond the classroom.**

---

## **The Kid Who Kept Breaking Things**

**Then came the period when my curiosity really started getting out of control.**

**My father was a power engineer, so I naturally became interested in electricity, electronics, and how machines worked.**

**And my method of learning was very simple:**

**Open it. See what's inside. Try to understand it.**

**Sometimes I repaired things.**

**Sometimes I broke them.**

**And sometimes I broke them while trying to repair them.**

**I started opening household appliances just to understand how they worked. I even tried taking the motor out of a remote-controlled toy car.**

**I wasn't studying electronics formally. I was just curious.**

**I remember creating a light bulb system that would turn on when someone clapped and then turn off after the next clap.**

**I kept trying things like that.**

**Looking back, I think this was one of the first places where my personality really started showing itself.**

**I liked learning by doing.**

**I didn't just want someone to tell me how something worked.**

**I wanted to touch it, open it, experiment with it, and figure it out myself.**

---

## **School, Expectations and a Change in Direction**

**Eventually, I studied at Vivekanand Inter College, Almora.**

**I scored 92% in Class 10.**

**My parents considered me a bright student, although at that time I personally felt that the exams were relatively easy.**

**For Classes 11 and 12, I chose the science stream.**

**I scored 86% in Class 12.**

**At that point, like many students, I initially thought that I would go for engineering and pursue a B.Tech.**

**But life didn't exactly go according to that plan.**

**For reasons I haven't gone into here, I eventually chose a B.Sc. in Physics, Chemistry and Mathematics.**

**I completed the three-year degree with first division.**

**But if I'm being honest, I didn't particularly enjoy that course.**

**It wasn't really where my interests were heading.**

**There was also another important part of my life during this period.**

**I developed feelings for a girl named Mansi.**

**It was one-sided love, and I think I spent almost a year thinking about it and focusing on it more than I should have.**

**I don't want to go deeply into the personal details, but it was still an important part of my life.**

**Sometimes a particular phase doesn't seem important while you're living through it, but later, when you look back, you realize that it changed the way you think.**

**For me, that was one of those phases.**

---

## **Graduation — Where Friendship Became the Story**

**After school, I entered another completely different chapter of my life: graduation.**

**I pursued my graduation from 2021 to 2023, and honestly, these three years gave me some of my best memories.**

**Not necessarily because of academics.**

**Not because of marks.**

**But because of friends.**

**I already had two old friends—Gaurav Mehta, whom I had known since Class 6, and Jeevan Singh Pawar.**

**Then, during graduation, I met Abhishek Tiwari.**

**Slowly, the four of us became really close.**

**We were the kind of friends who could meet just to go for a morning walk and somehow turn the entire thing into two hours of bakchodi.**

**We would talk about running.**

**We would plan to be productive.**

**And then we'd mostly make fun of each other.**

**Gaurav had a bicycle, and all of us used to ride it one by one.**

**I especially wanted to learn bicycle stunts.**

**I tried.**

**I really tried.**

**But somehow, I never managed to perform even one proper stunt.**

**Even today, that's one of those silly memories that makes me smile.**

**Gaurav, Abhishek and I were also in the same course.**

**As graduation started coming to an end, we began spending even more time together.**

**After college, we would often go to restaurants.**

**And then came another important activity:**

**Fighting over the bill.**

**"Tu pay kar."**

**"Why me?"**

**"Arey, this time you have to pay."**

**"Bas ₹5 hi toh zyada hai, tu kar de."**

**It sounds stupid now.**

**But those tiny arguments were actually some of our best memories.**

**We weren't doing anything extraordinary.**

**We were just young, we had each other, and we were enjoying life.**

---

### **The Plan That Didn't Work**

**As graduation was coming to an end, the three of us—me, Gaurav and Abhishek—made a plan.**

**We wanted to go to the same city for further education or job hunting.**

**Basically, we wanted to stay together.**

**So we decided to give the CUET-PG exam.**

**All three of us appeared for it.**

**And all three of us failed.**

**So... the plan didn't exactly work.**

**But even that failure gave us another memory.**

**We had gone to Haridwar for the examination, and instead of treating it as just an exam trip, we explored Haridwar together.**

**We also planned a trip to Rishikesh.**

**Eventually, Gaurav decided to focus on government-job preparation.**

**Abhishek and I still wanted to pursue post-graduation.**

**So we both took a one-year gap.**

**At the time, it probably felt like a delay.**

**But looking back, that gap became an important turning point in my life.**

---

## **Delhi — Exam Ke Bahane Adventure**

**After that gap, Abhishek and I decided to appear for the NIMCET examination.**

**And for the exam, we went to Delhi.**

**Officially, we were going to Delhi for one reason:**

**Give the exam and come back.**

**But obviously, we had other plans.**

**We told our parents that we were going for the exam—which was completely true.**

**We gave the exam.**

**And then we started exploring Delhi.**

**We travelled around, explored the city and just enjoyed being together in a completely different place.**

**One of my favourite memories from that trip is actually something extremely small.**

**A ₹30 kulfi.**

**I paid for it.**

**Later, we had sweet corn at a metro station.**

**This time, Abhishek paid.**

**And somehow, even those tiny expenses became jokes between us.**

**"I gave you a treat."**

**"Yeah, but I also gave you a treat."**

**That's the kind of friendship we had.**

**The amount didn't matter.**

**The memory did.**

**Even now, when I think about those days, I don't remember every location we visited.**

**What I remember is the feeling.**

**Being young.**

**Having a close friend beside me.**

**Exploring a new city.**

**Eating something cheap.**

**Laughing over who paid ₹30.**

**And not worrying too much about what life was going to become.**

---

**Karan — A Friend Since Class 6**

**There is another person whose story deserves a separate place in my life.**

**His name is Karan Mardolia.**

**I met Karan in Class 6, and we remained very good friends all the way through Class 12.**

**So we literally grew up together.**

**Karan has always had a different personality.**

**Personally, I feel that he gets jealous quite easily—not specifically of me, but generally when he sees someone doing something better or something different.**

**He also has a very critical nature.**

**He likes pointing out people's faults.**

**And then, after criticizing something, he might say:**

**"No, no, I'm not criticizing. I'm just telling you the faults so you can improve."**

**Maybe that is genuinely how he sees it.**

**But sometimes, from the other person's side, it can feel more like negative criticism.**

**He's also a big overthinker.**

**Before doing something for someone, he sometimes thinks about what the other person will do for him in return.**

**His thinking can be something like:**

**"If I do this for him, what will he do for me?"**

**That's simply part of his personality.**

**But despite all of these things, Karan has still been a very good friend of mine.**

**And we're still connected.**

**A few months ago, he also got a government job.**

**Among our old group, he has reached that milestone, and I'm genuinely happy that something worked out for him.**

**I don't see friendship as a competition.**

**Every friend has played a different role in my life.**

---

## **Almora — The Place I Call Home**

**If you ask me about one place that will always remain special to me, I would say Almora.**

**Almora is my hometown.**

**No matter where I go in the future, Almora will always feel like home.**

**One of my favourite places there is Kasar Devi Mandir.**

**I also love exploring food places around Almora.**

**I enjoy momos, and I have spent time eating at different local places, including Pawa and Bhagwati Chaat Bhandar.**

**But food isn't the only thing I enjoy about Almora.**

**I've always been attracted to places where there is water.**

**Give me a place where I can see a waterfall, a lake, a river, or even a small stream flowing through the landscape, and I'll probably enjoy being there.**

**I don't necessarily need some famous tourist destination.**

**Sometimes, just sitting somewhere peaceful and watching water flow is enough.**

**That's one of the things I love about the places around Almora.**

---

## **Gaurav — A Friendship That Goes Way Back**

**My friendship with Gaurav is different because it goes all the way back to Class 6.**

**There are so many memories with him that I couldn't possibly document all of them.**

**I've ridden his bike.**

**I've gone to his home.**

**I've travelled with him.**

**I've explored places with him.**

**And I've spent countless hours simply talking and joking around.**

**Some friendships become so old that they stop feeling like ordinary friendships.**

**They become a part of your life.**

**Gaurav is one of those people for me.**

**If I had to name my closest friends, I would say Abhishek, Gaurav, Karan and Jeevan.**

**But I don't really want to rank them.**

**For me, they all have their own place.**

**I love all of them.**

---

## **Post-Graduation — A Completely New Chapter**

**After graduation and the gap year, another major chapter of my life began.**

**I decided to pursue MCA, and eventually I got admission to Hemvati Nandan Bahuguna Garhwal University — HNBGU.**

**That meant moving to Srinagar, Garhwal.**

**And Srinagar gave me an entirely new world.**

**New college.**

**New hostel.**

**New people.**

**New experiences.**

**And, of course, new friends.**

**One of the most important people I met there was Kartik.**

**Kartik is one of the most genuine people I've met.**

**He helped me in so many different situations.**

**Studies.**

**Relationships.**

**Financial situations.**

**And even those random moments when I was simply stuck or didn't know what to do.**

**Whenever I needed someone, Kartik was often there.**

**I also made several other friends during my hostel and college life.**

**There was Anirudh, who was both my hostel mate and my classmate. We used to share our experiences with each other and talk about whatever was happening in our lives.**

**I also became friends with Sujal, Shivam and Soumya through hostel and college life.**

**But if I had to talk about the person who became especially close to me during my post-graduation years, I would say Kartik.**

---

### **Kartik and the Experiences I Had Never Had Before**

**Kartik also introduced me to some experiences that were completely new to me.**

**My first cigarette was with Kartik.**

**My first beer was with Kartik.**

**My first experience with liquor/alcohol was also with Kartik.**

**So sometimes I joke that:**

**Kartik taught me a lot of bad things.**

**But that's only one side of the story.**

**The more important thing is that Kartik was there for me.**

**When I was bored, he was there.**

**When I felt stuck, he was there.**

**When I needed help, he was there.**

**He helped me a lot during my post-graduation.**

**Some of the experiences he introduced me to weren't necessarily good habits, but the friendship itself became something very meaningful to me.**

**And we're still friends.**

---

## **Srinagar — My University Life**

**My years in Srinagar weren't only about academics.**

**I explored a lot of the Garhwal region.**

**I visited Badrinath and other temples.**

**I went on treks.**

**I spent time around the Ganga.**

**There were places that became part of my everyday life.**

**Ganga Darshan was one of my favourite spots. I enjoyed the tea there and, more importantly, the view.**

**Then there was Shyam Canteen.**

**We would sit there, eat samosa and patties, drink tea, talk about new ideas, discuss random things, and spend time together.**

**The Ganga ghats also became an important part of my Srinagar memories.**

**I used to visit Chauhan PG, where Kartik lived, and we would spend time doing silly and memorable things.**

**I lived in SDS Boys' Hostel, which itself became a huge collection of memories—friendship, conversations, late**

**discussions, everyday hostel life, and all the small things that make hostel life memorable.**

**And then there were Jain samosas.**

**Sometimes, you don't realize you're creating memories while you're living them.**

**You think you're just eating samosas with friends.**

**Years later, you realize:**

***"That was actually a really good time."***

---

## **Learning Beyond the Classroom**

**During my MCA, I also participated in the Technology Pre-Incubation Cell (TPIC) at the university.**

**That gave me an opportunity to explore technology, ideas and things beyond the regular academic curriculum.**

**Slowly, I started becoming more serious about computer science.**

**The same kid who once opened household appliances to understand what was inside them was now trying to understand software, programming and technology.**

**The curiosity was still there.**

**The subject had simply changed.**

---

## **Another Chapter of Love**

**During my postgraduate years, I also developed feelings for another person, Anjali.**

**This time, unlike my earlier experience with Mansi, the feelings seemed to be mutual.**

**We entered into a relationship.**

**Eventually, we broke up.**

**I don't want to go into the private details of that relationship.**

**For me, it is simply another chapter of my life.**

**Something happened.**

**I experienced it.**

**I learned from it.**

**And then life moved forward.**

---

## **From Physics to Computer Science**

**If I look at my journey as a whole, one of the biggest changes in my life was my shift from science to computer science.**

**I completed my B.Sc. in Physics, Chemistry and Mathematics at SSJ University, Almora.**

**After that, I took a gap year.**

**I started thinking seriously about what I wanted to do.**

**And eventually, I became interested in computer science.**

**I prepared for entrance examinations such as NIMCET and CUET-PG, among others.**

**Eventually, I secured admission to HNBGU for my MCA.**

**And there, things started changing.**

**I worked hard.**

**I learned a lot.**

**I became more interested in software development.**

**And eventually, in 2026, I completed my MCA and earned a gold medal for my academic performance.**

**That was a very meaningful moment for me because it felt like I had finally found a field that actually matched my interests.**

---

**From Student to Software Developer**

**My journey didn't stop with education.**

**I worked as a paid Software Developer Intern at The Boring Education from 1 June 2025 to 31 May 2026.**

**That experience gave me exposure to software development and educational technology.**

**And now, I am working at High Labs in a software-development role.**

**High Labs is also a computer training institute where students learn computer science and industry-oriented skills.**

**Interestingly, I enjoy both sides of this.**

**I enjoy coding.**

**But I also enjoy teaching.**

**I like taking a difficult concept and explaining it in simple language.**

**I like using practical examples.**

**And I like helping people build strong fundamentals instead of simply giving them answers.**

**I've taught C, C++, and Object-Oriented Programming, and I've also mentored students in coding.**

**So in some ways, my journey has come full circle.**

**The student who was once curious about how things worked has now become someone who enjoys helping other people understand how things work.**

---

## **The Things I Build**

**Over time, I have worked on several projects.**

**One of them is Annpurna, a prepaid-meal network concept for hostel residents and students living away from home.**

**I've also worked on a MERN-based food diary and ordering project, Punya Pravah, a React Native application, and a background-removal application.**

**My technical interests and skills include:**

- React Native**
- React.js**
- HTML**
- CSS**

- **JavaScript**
- **Java**
- **C**
- **Node.js**
- **Express.js**
- **MongoDB**
- **JWT**
- **Stripe**
- **Appwrite**
- **Firebase**
- **Git and GitHub**
- **Excel**
- **Power BI**
- **Python**

**I'm still learning, though.**

**I don't see this list as the end of my journey.**

**It's just where I am right now.**

---

## **Looking Back**

**When I look back at my life from Ranikhet to Almora, from school to graduation, from Almora to Srinagar, and from science to computer science, I realize that my journey hasn't really been a straight line.**

**I've changed directions.**

**I've failed exams.**

**I've taken a gap year.**

**I've made plans that didn't work.**

**I've made new plans.**

**I've fallen in love.**

**I've had friendships that lasted for years.**

**I've met people who stayed.**

**I've met people who became memories.**

**I've explored cities because I had an exam there.**

**I've travelled with friends.**

**I've fought over ₹5 restaurant bills.**

**I've argued over who gave whom a ₹30 treat.**

**I've eaten samosas and momos with friends.**

**I've sat beside the Ganga.**

**I've explored mountains.**

**I've gone on treks.**

**I've experimented with technology.**

**I've broken things while trying to understand them.**

**And eventually, I've found my way into computer science.**

**I don't think I can say exactly where my story will go from here.**

**But if you ask me who I am right now, I would simply say:**

**Hey, I'm Bharat.**

**I'm someone who loves technology, enjoys teaching, values friendship, loves the mountains and water, enjoys exploring new places, and is still figuring out what comes next.**

**And this is only the story of my first 23 years.**

**The rest of the story is still being written.**
